STRATEGIC RESOURCE MODELING

Automate and accelerate the data consumption and resource modeling process. Generate consistent, 3D resource models based on geoscientific best practice. Facilitate data consumption, modeling and interrogation to test geological hypothesis and conduct a resource evaluation and risks assessment, based on sensitivity analysis.

**INPUT:** Updated geological model

1. Import & manage geological model
2. Visualize & analyze geological model
3. Conduct resource estimation
4. Perform sensitivity analysis
5. Share block model & collaborate with team

**OUTPUT:** Updated block model
